

## T-Mac® Data Loggers

For Customers, Supply Networks and Earth Systems

### POWER-LOGGER

#### Description:

The Power-Logger is a portable 3 Phase voltage and current recorder with unlimited recording capability. The Power-Logger requires NO DOWNLOADING. It is designed for use in all supply quality investigations, but is especially useful in industrial and commercial areas.

#### Features:

- Dynamically adjusts its recording rate (adjusts rate at which data is recorded when system events are detected)
- Records directly to a USB flash drive (1GB Flash Drive = 1 year of recording)
- No Downloading required - Just plug and play.
- Re-charges itself during recording
- Weatherproof – suitable for pole top use.
- Flexible C.T.'s for ease of installation
- Various types of voltage leads available
- Extremely Robust
- Data analysis software is included with the units
- Also available in a single phase version

#### Operation:

Insert USB flash drive. Clip the flexible C.T.'s around the cables to be measured. Connect voltage leads to mains to be measured. Leave for time required. Disconnect voltage leads, unclip C.T.'s. Remove flash drive, data is ready to use.
